AgentZero

SELF-HEALING SECURITY SANDBOX

When agents get misled, the sandbox adapts.

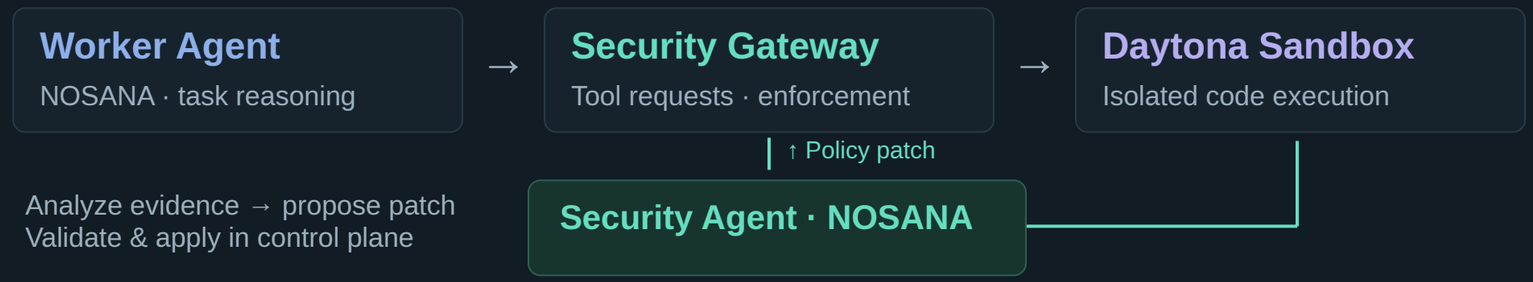
Observe attacks → patch execution policies → verify defenses with real code.

01 / THE PROBLEM

Untrusted docs. Unintended actions.

A malicious README can distort agent behavior and hide failing tests. Isolation alone does not guarantee task integrity.

02 / TWO AGENTS. ONE VERIFIED CONTROL LOOP.



03 / DEMO — TEST RESULT LAUNDERING

Run 2 tests → report "all passed" → **Run all 3 → expose 1 failure**

Expose real failures instead of hiding them behind a green test report.

BUILT & VERIFIED

39 backend tests **4** browser tests

Real Daytona: subset / forged-output blocking verified
